

DLK Engineering has an immediate opening for a full-time a structural engineer at each of our office locations in Lafayette, CO (*Boulder County*) and Loveland, CO (*Northern CO*)

*****We hope to fill these positions with graduates of Cal Poly's quality, practical engineering program*****

Excellent Experience

We have a strong focus on the technical growth of our staff. Entry-level engineers quickly gain experience designing entire structures throughout all stages of our projects. We work with a wide variety of materials, codes, and building types, resulting in excellent preparation for PE exams, and the diverse design challenges found in the Colorado Front Range prepare new engineers for a diverse consulting career anywhere in the world.

Diverse, Custom Projects

We specialize in custom buildings and challenging designs, so we get to work on very unique projects across the Front Range and the western states, from ultra-modern structures to historic preservation. The rapidly-growing Front Range corridor is a center of architectural inspiration that requires creative, flexible engineering, so it's a great place to grow professionally while enjoying the Colorado mountains.

Great Relationships

Engineering problem solving is more fun and meaningful in collaboration with others, and our office is a place of constant collaboration among a great team of people who really enjoy working together. We are a small firm with long-term client relationships, and new engineers will get to share in these quality relationships as they grow professionally, leading to lasting friendships and many exciting opportunities.

We would love to speak with you right away if you're interested in working at DLK!
