

### Why Solid Rock?!

At Solid Rock Structural Solutions, our passion is to help and serve others. We understand that the journey and relationships we experience with our clients and our fellow team members is as fun and rewarding as the work product itself. Developing creative structural solutions and providing excellent client service are the direct result of having a collaborative team that respects and values each other. At Solid Rock, our internal culture is an open, free-thinking environment, that encourages all team members to provide input, and empowers them to reach their full potential.

Solid Rock is a recently established and fast-growing structural engineering consulting firm located in Newport Beach, California. Solid Rock was created with a vision that would provide structural consulting engineering services to clients with an environment where structural design solutions can be generated in a truly collaborative manner. We understand that each project is different and has its own set of unique parameters and, therefore, a unique structural solution. Our extensive experience in different building materials and types allows us to leverage our expertise to help determine the optimal structural system solution for the design and construction team, all the while meeting the needs of the end user.
