A New Way to Intern
This year Forell/Elsesser has launched a different kind of internship along with our partners at DPR construction and UCSF. This Integrated Skills Development pilot program is founded on the desire to provide broader, industrywide skills to students as they prepare to enter an evolving workplace.

Why?
Developed as a response to the industry’s move towards Integrated Product Delivery we are providing a means for new engineers, construction managers and architects to see the design and construction processes from the vantage point of each profession. The goal is to enable interns to have a better insight and real experience of what a project involves as a whole.

How is it different?
The essence of the new internship program is sharing our experience and learning from sharing! Instead of spending an entire summer in one firm, interns have the opportunity to experience how other members of the project team work by sharing their time between 2 or even 3 offices. This is the Integrated Skills Development aspect of the program. Interns have the opportunity to learn about project delivery from all angles which results, we believe, in better professional preparation for our young engineers, construction managers and architects.

If you are interested, qualified and available, send your resume to recruiting@forell.com

Ideal candidate is a junior or senior planning on receiving their MS
