

## Ag Systems Management Internship

Come experience an extensive Ag Systems Management Internship, Deep in the Heart of Texas! 360 Ag Management is a group of farming operations in central Texas with a focus on producing high quality milk. This program helps students gain the experience and skills necessary to succeed in their post graduate careers.

Our internship program encourages students to develop skills that are applicable across the entire agriculture industry, including management and service of: irrigation systems, electrical motors, and water well systems. Additionally, there is an opportunity to learn about environmental management, general construction repair and planning, and renewable energy systems management.

The City of Dublin is a one-hour drive from the Dallas/Ft. Worth area and just minutes from the exciting college town of Stephenville, the home of Tarleton State University. The University's state-of-the-art dairy has ongoing research projects with the Jersey / Holstein herd.

Successful interns have the potential for full-time employment on one of our repair crews, based on their interest and abilities. Internship positions are available year-round and are typically ten weeks in duration.

If you're interested, please apply by emailing your resume and cover letter to [summer@360agmgt.com](mailto:summer@360agmgt.com) by December 31<sup>st</sup>, 2023.
