

SnackIndex

By: Ren Blanding

Abstract

SnackIndex is an application concept all about sharing, rating, and recommending snacks from around the world! Our aim is to remove the barriers that stop people from trying new foods, and in doing so, create an inclusive environment where users can come together to expand their global palate, regardless of allergies or dietary restriction.

Project Objectives

Accessibility

Screens must be well design and tested for usability and accesibility to ensure that all users can comfortably and intuitively use the application

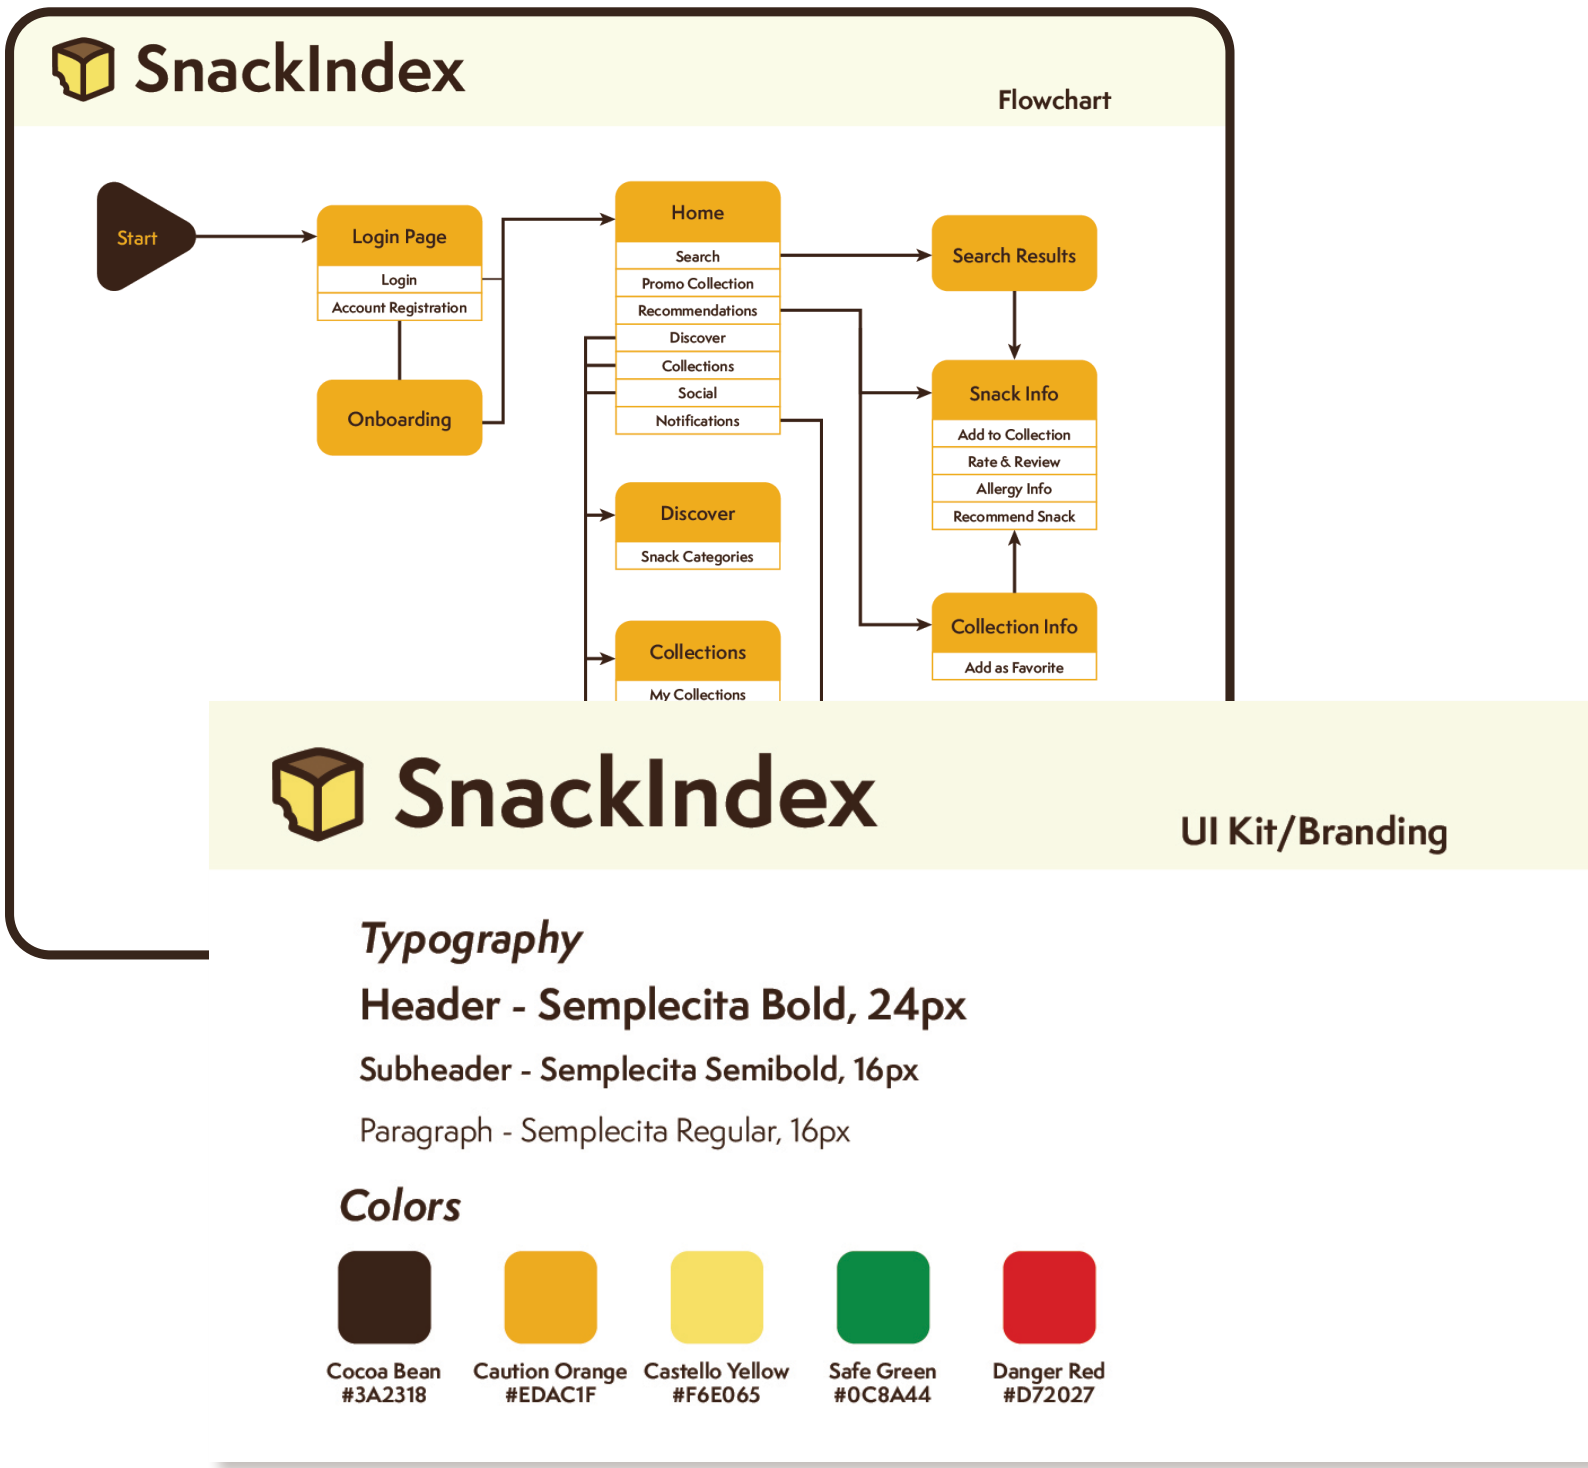

Learning Prototyping

Moveable prototypes will be complex in order to demonstrate the application in action

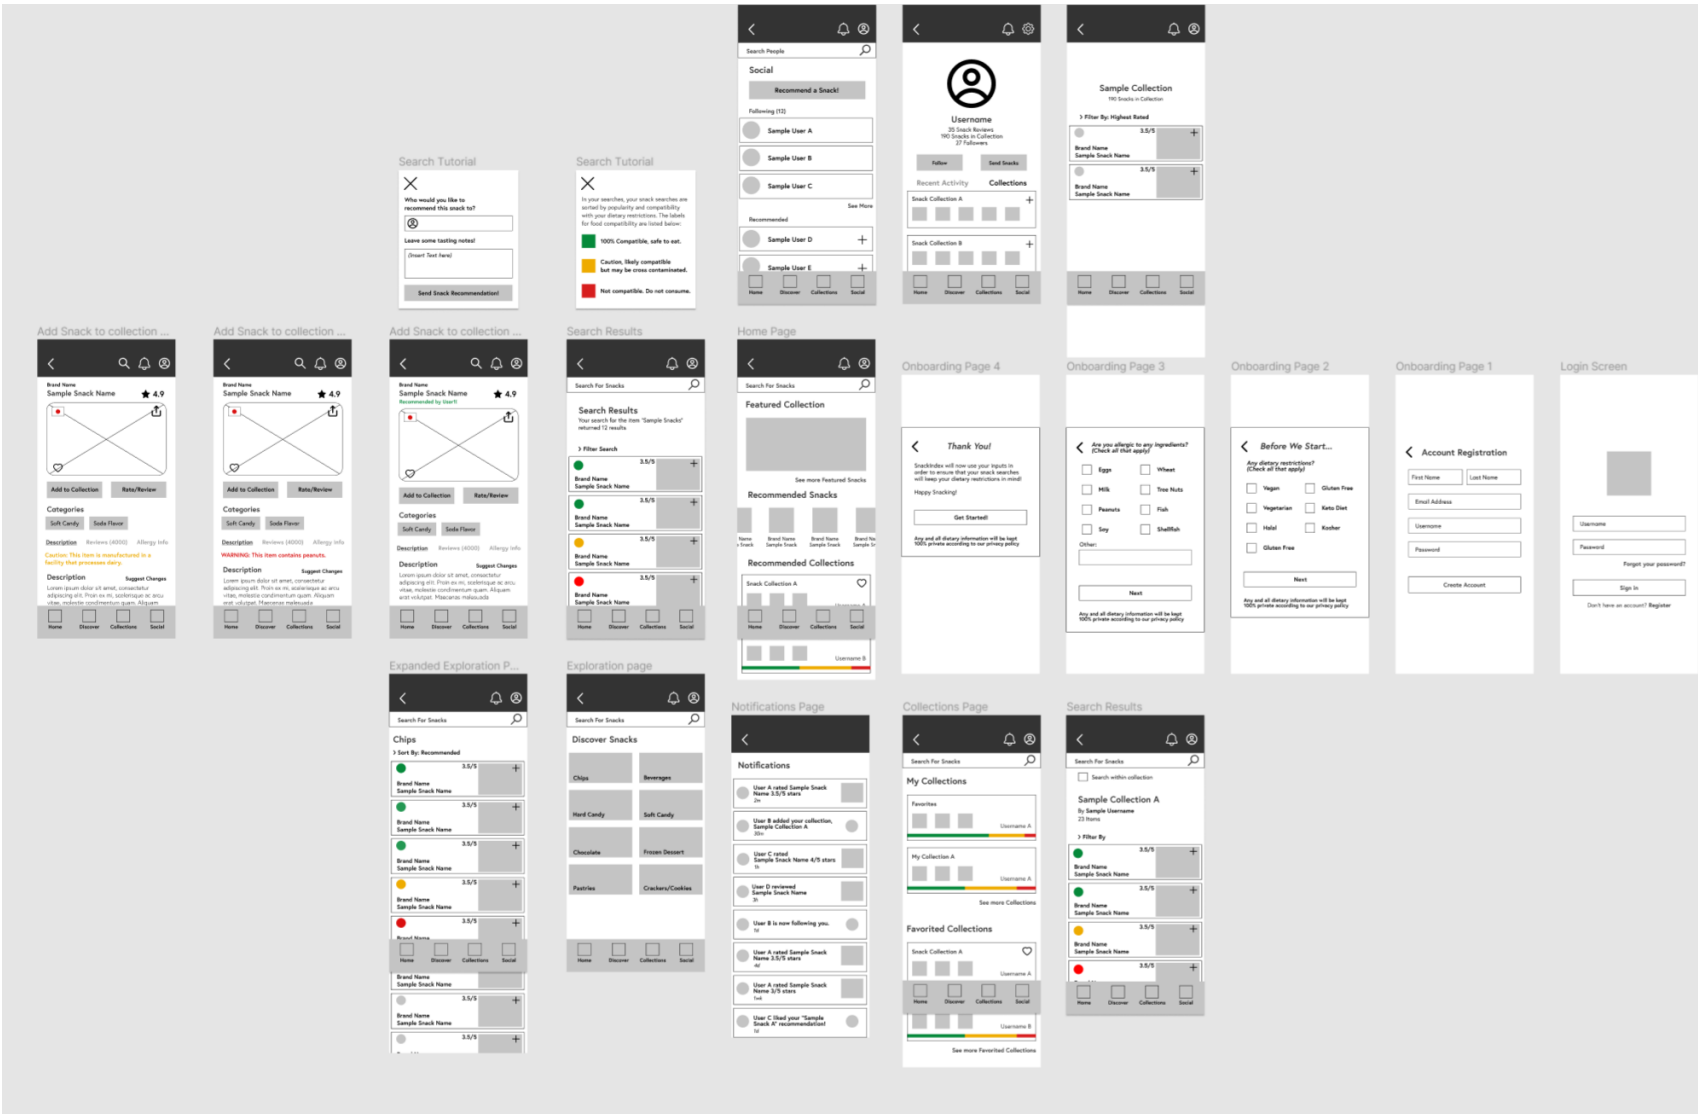

Creating Branding Guidelines

Branding must effectively communicate the application's purpose and be visually appealing

User Flow and Branding:

Medium Fidelity Wireframes:

Prototype:
