

ELIGIBILITY FOR ENROLLMENT

Industrial and Manufacturing Engineering students with senior standing may enroll in the senior project course. Students also must have the consent of the instructor (administrative advisor). Generally students who have less than 50 units or less remaining to complete the degree may enroll in IME 481.

In addition, students must pass a Senior Exam given during the first week of IME 481 in order to continue in the Senior Project Sequence.

IME 481 and IME 482 should be taken during two successive quarters. It is possible with some projects to take IME 481 in the Spring and IME 482 in the Fall. This will have to be discussed with the administrative advisor prior to beginning the project.

Students will have to register for IME 481/482 during the academic school year (not summer quarter), and the student should be on campus. Students should not register for these courses when on a Co-op.

A change of the project or technical advisor will normally require the student to start the senior project sequence over by repeating IME 481.

It is possible to do a senior project as part of a team. These team senior projects must be approved by the technical advisor. In addition, it is often desirable to define specific areas of responsibility so that grading can be completed individually.
