Material Palette
- Ultra low-level lighting
- Monoliths
- Steel seating
- Custom granite benches
- Plant palette
- Landscaping
- Native plants
- Permeable pavers for driveways
- Concrete pavers for pathways

Plant Palette
- Black sage
- California boxwood
- Field grass
- Eucalyptus
- Oak
- Spirea

Concept Development

After carefully selecting the programming types of spaces for these, we decided that the focus of our design would be on the park and the community. The main concept proposed unites the space into a series of connected spaces, but not many people from various communities. This was very critical because of the lack of attraction towards people of different ages. On this path, we encourage people to stay, even when walking through. With this in mind, we sought opportunities to weave our vision statement: “Bridging Gap” and making an effective and usable place.

Project Goals
- Create a large public space that is accessible, open, and attractive to people of all ages.
- Maintain the forms of the natural and urban forms of the park and enhance it.
- Enable an enjoyable experience for users in all ages by including features that operate at night.
- Attract people during regular park hours as well as during park hours.
- Push for people to interact with each other, though, rather than making it easy for people to isolate themselves.

Planting:
- Colorful and varied native plant palette
- Native and non-native plant palette
- Low-maintenance plant palette
