Immunization Requirement for CD131 & CD230

As part of the course requirements for CD131 and CD230, students will interact with children in Cal Poly’s Preschool Learning Lab. State licensing requires that all persons working with children in licensed childcare centers must have verification of immunizations. Therefore, students registered for CD131 or CD230 will need to provide verification of the following immunizations:

- TB clearance (dated within one year of taking CD131 or CD230)
- Measles vaccine (usually in the form of a MMR)
- Pertussis vaccine (usually in the form of a DTP)
- Flu vaccine (dated within August 1 and December 1 of the year enrolled).
  
  **NOTE:** Flu vaccine can be declined by signing a declaration that you have declined this vaccine (available on the first day of class).

Verification needs to be in paper form and should be turned in to the PSYCD Department Office. Verification must be turned in by the last day of class in the previous quarter in order to be fully enrolled in the course.

**NOTE:** Verification is only needed once. If verification is provided for CD131, it will not be needed again for CD230 if both classes are taken within one year of one another.

If you have questions, please stop by or call the PSYCD Department Office.
