Dr. Alexandra Rosati at the University of Michigan-Ann Arbor is accepting applications for a full-time research technician in the Cognitive Evolution Group. The lab coordinator will organize and conduct research on cognition in primates and humans. Responsibilities will include: overseeing data collection and coding of nonhuman primate behavioral research at several field sites, human subject recruitment and scheduling on site, video coding, managing animal and human subject ethics protocols, supervising undergraduate assistants in research, and active participation in research. This position provides extensive research experience and is ideal for recent college graduates planning to attend graduate school in the future.

For more information on the position and how to apply, please find the detailed job ad here.
