The Computational Cognitive Development lab (PI: Dr. Elizabeth Bonawitz) at Rutgers-Newark is currently seeking summer interns interested in pursuing cognitive, computational, and developmental research opportunities. The internship will last 8 - 10 weeks, with a flexible start date (preferably early - mid June). This is a full-time, paid position.

Interns will work directly on a specific project with senior graduate students or postdoctoral researchers looking at how infants, preschoolers, and school-age children learn. No experience in computational modeling is required, but interns will have the opportunity to learn more about this approach as well. Further information about our research group can be found on our website (http://ccdlab.rutgers.edu/).

To apply or inquire further, please contact Joseph Colantonio (joseph.colantonio@rutgers.edu) or Elise Mahaffey (em952@psychology.rutgers.edu).
