

BlazerWilkinsonGee

Automated Irrigation Systems (AIS) Supervisor

The AIS supervisor is responsible for the various irrigation and fertilization systems used on several crops. The AIS Supervisor manages the systems and responds to error codes and system failures. The AIS Supervisor should be familiar enough with the systems to make minor repairs and perform computer and performance trouble shooting.

Hours:

Full time

Location:

Santa Maria, California

Required Experience:

Some experience with automated irrigation systems and substrate systems is a plus, but not required. On the job training is possible. The ability to speak Spanish is preferred but not required. Ability to work independently and flexibility while communicating effectively with others.

Must be over 18 years of age and have a valid driver's license. May be required to utilize personal vehicle and insurance. Attendance is an essential function of this job that requires daily inspections and rare off-hours, emergency repairs and attention.

Justification:

Automated irrigation systems are increasingly being used on the commercial farm level. BlazerWilkinsinGee is looking for someone to manage the current systems and help develop future systems. We believe that as a company we need to have staff that is proficient with these systems to give us a competitive edge in the marketplace. A successful AIS Supervisor will give us the ability to further develop and innovate our farming practices thereby increasing the AIS Supervisors roll and responsibilities within the company.
